## Personalized access for robotic cells

Have you ever thought about designing your robotic cells in a way that only personalized access is possible?

With our TM-Series we provide you the ideal solution.

Each authorized employee receives a personalized RFID key that is activated at his or her authorization level. Uncertain passwords or conventional key switches are thus a thing of the past and are replaced by modern technology voted to industry 4.0.

The access times are stored per person so that an explicit evaluation is possible in case of error or damage.

The annual safety instruction is also checked. Once this has expired, the employee automatically receives no more access to the robotic cell. Only after the necessary safety instruction has been refreshed, the access will be permitted again.

These efficient and economical aspects of the TM series guarantee your users and your company a maximum of security and flexibility.
